Agenda

Langchain4j for
Jakarta EE developers

The current context

- You may have seen:
 - LangChain4j +  Quarkus =  Chatbot intelligent
- But in production you're running:
 -  WildFly
 -  Payara
 -  Liberty
 -  Helidon
 -  GlassFish
 -  Quarkus
- So, what's next? 

The answer

- `@RegisterAIService`
- CDI bridges the gap between LangChain4j and your server.
 - Inject an AI agent as naturally as an `EntityManager`

Workshop programme

-  **Configuration and Architecture**
 - Prerequisites, stack overview, CDI extension internals
-  **Exercise 1**
 - Injectable AI Agent – @RegisterAIService, streaming, multimodal vision
-  **Exercise 2**
 - Resilience and Observability – Memory, RAG, tools, @Retry, @CircuitBreaker, OpenTelemetry
-  **Exercise 3**
 - MCP Integration – Model Context Protocol, external tool providers
-  **Exercise 4 – Guardrails**
 - I/O validation, filtering, prompt security
-  **Exercise 5**
 - Agent to Agent (A2A) – multi-agent orchestration, A2A protocol, Java/Jakarta SDK
-  **Conclusion and Next Steps**
 - roadmap, Q&A
- Each exercise has a base/ outline and a solution/ reference
 - work at your own pace.
